Description

The pulp_ansible collection list only shows that a repo contains a collection if the highest version of the collection is in the repo. For example:

/pulp_ansible/galaxy/published/api/v3/collections/<my_namespace>/<my_collection>/versions/ shows many versions

however /pulp_ansible/galaxy/published/api/v3/collections/ does not show <my_collection> in list if the highest version is not in "published" repo but in another repo such as "staging"

This is likely related to the is_highest check here:
