<b>Description</b>			
For example when the user requests this: /pulp_ansible/galaxy/<path:path>/api/v3/metadata/collections/			
They will receive this:			
<pre>[{   "href": "string",   "namespace": "string",   "name": "string",   "deprecated": true,   "versions_url": "string",   "highest_version": "string",   "created_at": "string",   "updated_at": "string" }, ..., {   "href": "string",   "namespace": "string",   "name": "string",   "deprecated": true,   "versions_url": "string",   "highest_version": "string",   "created_at": "string",   "updated_at": "string" }]</pre>			
This is the same data as returned by the <a href="#">existing collections endpoint</a> except:			
<ul style="list-style-type: none"><li>• It does not paginate</li><li>• It does not contain the links and results portion of the response ... just the list of serialized collections.</li></ul>
