Description

In order to add RBAC to RepositoryVersion viewset in plugins, there needs to be a way to check permissions of a corresponding repository.

Because repository versions are so tightly coupled with repositories, there is no need to create a separate set of permissions for versions.

Each plugin will need to check those, so it makes sense to add it to the global access conditions.

Associated revisions

Revision 5d79a056 - 01/26/2021 05:25 PM - ttereshc

Add repo attribute check to global access conditions

Plugins can leverage it at least in policies for repository version viewsets.
