Description			
<p>As some modules are leaving ansible core to collections, we need to declare collections as dependencies so ansible-galaxy can install them.</p> <p>pulp_installer provides a set of roles, and the user may not use all the roles, pulp_database role needs community.postgresql for example.</p> <p>How can we deal with these "conditional dependencies"? "if the user gets pulp_dabase role install community.postgresql else don't install it"</p> <p>https://github.com/pulp/pulp_installer/pull/567</p>
