History

#1 - 01/07/2015 07:45 PM - bcourt

- Priority changed from Normal to High

#2 - 01/07/2015 09:49 PM - bcourt

- Create a pulp-bot github user
- Create an automated builder to generate the base repositories for a given X.Y stream of pulp (excluding the plugins) that updates either periodically or when someone merges to to the x.y-dev branch and push the repositories to https://repos.fedorapeople.org/repos/pulp/pulp/testing/automation/X.Y/ or testing/automation/master/.
- Create a jenkins builder to install the dependencies from the repo generated in the previous bullet & run the core pulp unit tests on every PR automatically
- The jenkins pull request builder plugin can provide the monitoring & updating of the github PRs as well as the ability to whitelist which users will have PRs built automatically and which users require the intervention of a core Pulp team member before their PR gets built on the internal RedHat infrastructure.
