<b>Description</b>			
The content app performs downloading <a href="#">here</a> for not-yet-downloaded Artifacts using their RemoteArtifacts. We need an additional check to be performed there that will:			
<ol style="list-style-type: none"><li>1. Check if the Artifact to be downloaded has a RemoteArtifact that was created by an ACS</li><li>2. If there is, use the RemoteArtifact and Remote the ACS created for downloading</li><li>3. If there is not, do what you did today.</li></ol>

I'm wondering what the best way to look up whether a RemoteArtifact belongs to an ACS? I see two options:

RemoteArtifact -> Remote -> ACS

RemoteArtifact -> ContentArtifact -> Content -> Repository -> ACS Path -> ACS

I guess the first is shorter?
