Description

Hi, I ran into an issue when running `pulp-admin rpm repo publish run --repo-id \$MY_REPO`.

I've attached admin.log and curated server_calls.log for analysis.

I managed to get past this though, with a one line patch guided by the traceback in the admin.log (pull request under way, in case you want that..:).

Not sure if it is the right thing to do, but it seemed to work..
