

Pulp - Issue #9024

Downloads do not seem to use proxy authentication even when specified

07/06/2021 11:21 PM - jsherril@redhat.com

Status:	CLOSED - CURRENTRELEASE	Start date:	
Priority:	High	Due date:

Platform Release:		Quarter:	
OS:			
Triaged:	Yes		

Description

I tried with both file and rpm repos, if i specify a proxy url, username and password, i can check pulps' db and see:

```
pulpcore=# select url, proxy_url, proxy_username, proxy_password from core_remote;
          url                | proxy_url | proxy_username | proxy_password
-----+-----+-----+-----
https://jlsherrill.fedorapeople.org/fake-repos/needed-errata/ | http://192.168.122.182:8888 | admin | redhat
```

so i am fairly confident that the username and password are being set properly. However, when i sync, i get:

```
407, message='Proxy Authentication Required', url=URL('http://192.168.122.182:8888')
```

looking at my squid logs, i see:

```
1625605398.930 0 192.168.122.143 TCP_DENIED/407 4235 CONNECT jlsherrill.fedorapeople.org:443 - HIER_NONE/- text/html
```

So I believe pulp isn't properly sending the proxy auth correctly?

Note that my curl command:

```
curl -vv -X GET https://jlsherrill.fedorapeople.org/fake-repos/needed-errata/repodata/repomd.xml --proxy http://192.168.122.182:8888 -H 'Proxy-Authorization: Basic YWRtaW46cmVkaGF0'
```

works without issue
