<b>Groomed:</b> No	

**Description**

Pulp ansible will hold the entire collections API. To accomplish that the following data models have to be moved over from galaxy ng:

- CollectionImport: this is already in pulp ansible, but is missing fields. Verify if it can be used as is, or if it requires the additional fields used in galaxy\_ng
- CollectionSyncTask: might be able to get rid of this and use locked resources on the task to tie sync tasks to remotes
- Namespace
