

Pulp - Issue #9084

Confusion around component versions

07/14/2021 05:10 PM - daviddavis

Status: CLOSED - WONTFIX	Start date:
Priority: Normal	Due date:
Assignee:	Estimated time: 0:00 hour
Category:	
Sprint/Milestone:	
Severity: 2. Medium	Groomed: No
Version:	Sprint Candidate: No
Platform Release:	Tags:
OS:	Sprint:
Triaged: Yes	Quarter:

Description

The status api reports the following:

```
"versions": [  
  {  
    "component": "core",  
    "version": "3.15.0.dev"  
  },  
  {  
    "component": "python",  
    "version": "3.5.0.dev"  
  }  
]
```

This has led to some confusion among users (see [here](#)) because they think the server is running Python 3.5 when actually python here refers to the python plugin.

History

#1 - 07/20/2021 07:41 PM - bmbouter

The only way I know to clarify this is in the docs, but I don't think that will effectively clear this up for those confused. Really an API like this would have been clearer:

```
"pulp_plugins": [  
  {  
    "django_app_name": "core",  
    "version": "3.15.0.dev"  
  },  
  {  
    "django_app_name": "python",  
    "version": "3.5.0.dev"  
  }  
]
```

#2 - 07/20/2021 07:41 PM - bmbouter

We could add a section like that and just have it mirror the data in the other one? It's not great but I do think it's a step in the right direction.

#3 - 07/27/2021 05:16 PM - dkliban@redhat.com

- Triaged changed from No to Yes

#4 - 08/03/2021 04:44 PM - daviddavis

- Status changed from NEW to CLOSED - WONTFIX

Discussed today at triage. We resolved the original problem in the CLI and adding a new section with dupe data would be confusing for users so we agreed to close this out.

#5 - 08/04/2021 11:33 AM - quba42

Alternative workaround solution: Bump the pulp_python plugin version to 4.0. Now no one will mistake it for the *python* version. ;-P
