

## OSTree Support - Story #911

As a user, I want the CLI to support additional settings used to sync with the remote.

<b>Sprint Candidate:</b>	Yes		
<b>Description</b>			
We need the ostree admin CLI to support the following SSL credentials on 'repo create':			
<pre>--feed-ca-cert      - full path to the CA certificate that should be used to                       verify the external repo server's SSL certificate --verify-feed-ssl   - if "true", the feed's SSL certificate will be verified                       against the feed_ca_cert --feed-cert         - full path to the certificate to use for authorization when                       accessing the external feed --feed-key          - full path to the private key for feed_cert --gpg-key           - used to verify the GPG signed commits pulled</pre>			
and add them to the import configuration.			
Further, we need to remove:			
<pre>--validate - if "true", the size and checksum of each synchronized file will               be verified against the repo metadata</pre>			
Because it does not apply to OSTree.
