

## RPM Support - Issue #9219

Backport # 9218 (CLOSED - CURRENTRELEASE): Backport #8622 "CentOS 8 BaseOS .treeinfo's [general] section says AppStream instead of BaseOS" to 3.14.z

### Mirrored .treeinfo metadata needs to be rewritten in cases where the relative location of the sub-repos moved

08/09/2021 06:25 PM - dalley

<b>Status:</b> CLOSED - DUPLICATE	<b>Start date:</b>
<b>Priority:</b> High	<b>Due date:</b>

<b>OS:</b>	<b>Sprint:</b>
<b>Triaged:</b> Yes	<b>Quarter:</b>
<b>Description</b>	
<p>When .treeinfo contains relative paths to a location outside of the repository, as is the case with CentOS 8, Pulp cannot serve those sub-repos precisely as they are. So it syncs all of them and publishes all of them into one repository with subdirectories for the sub-repos, and writes the locations of these sub-repos into the .treeinfo metadata.</p> <p>In the mirrored metadata case, the .treeinfo file will be pointing to the wrong locations, so we need to rewrite the .treeinfo file just like we do during a standard publish.</p> <p>As .treeinfo isn't checksummed or signed we aren't prevented from doing this.</p>
