

Pulp - Issue #9421

Add support for sslmode to settings in pulp and pulp-operator.

Description

In order to run AAP on Azure I need to enable the sslmode option for the database connection for automation hub.

Automation Hub runs as a django app and so needs a DATABASES configuration like this:

```
DATABASES = {
    'default': {
        'ENGINE': 'django.db.backends.postgresql',
        'NAME': "db_name",
        'USER': "db_username",
        'PASSWORD': "db_password",
        'HOST': "db_host",
        'OPTIONS': {'sslmode': 'require'},
    },
}
```

I am using the pulp-operator to install galaxy_ng and I would like the pulp-operator to look for this option in the databases secret:

```
---
apiVersion: v1
kind: Secret
metadata:
  name: galaxy-pulp-postgres-configuration
  namespace: default
stringData:
  host: postgres
  port: "5432"
  database: pulp
  username: pulp
  password: XXX
  sslmode: require
  type: unmanaged
type: Opaque
```
